WARNINGS & SAFETY INFORMATION

- **Rated pressure:** Recommended working pressure is 180 bar; maximum allowable pressure is 250 bar.
- **Recommended lubricant:** Hydraulic mineral oil H-LP series (H-LP32, H-LP46, H-LP68).
- **Oil filtration:** Use efficient filtration with periodic replacement; required filtration level is 25 µm.
- **Oil temperature:** Keep oil temperature between 40–50°C during operation. Do not exceed 80°C. High temperatures reduce viscosity and lubrication quality, decreasing cylinder performance and service life.
- **Rod load:** Never apply radial loads to the rod during operation.
- **Welding:**
 - Remove the rod completely before welding accessories on the bottom or rod end.
 - Allow welded parts to cool before reassembly.
 - Protect the rod from welding sparks to avoid chrome damage.
 - Absolutely avoid welding on the external diameter of the cylinder tube.
- **Painting:**
 - When oven-drying, do not exceed 80°C.
 - When cold-painting a cylinder with rod installed, protect the rod to avoid contamination of the wiper/seal.
- **Safety:**
 - Materials are not dangerous, but installation may involve risks.
 - Install shut-off valves or additional safety devices according to machine regulations.
 - The manufacturer is not responsible for damages caused by non-compliance or improper use.
- **Maintenance:**
 - Replace worn seals when required.
 - Pay attention to oil cleanliness and prevent contamination.
